

Student Record System

DESCRIPTION:-

Among all the projects listed above the Student Record System is best because of the design used in this project. The file handling method is used to store the records of the students in a particular file.

This file is used as a database for this project where you can perform the operations such as insert record, modify a record, search the record and also delete the record. one of the best features of this project is that you can generate the mark sheet of the students.

In this project, the console window is divided into two parts one is static which do not change and second is dynamic which changes from time to time. Text is coded using various colours which makes attractive.
